

## TERRA CLEAN 100

The perfect maintenance machine for professional surface cleaning of infilled artificial turf

- Reliable collection of surface dirt
- Clean separation of dirt and infill material
- Uniform, intensive sweeping and sieving performance

# TERRA CLEAN 100

The regular basic care of infilled artificial turf is decisive for value retention and the increased safety on the grounds. Organic components such as leaves, petals, and twigs and especially safety-relevant contaminants such as glass splinters, bottle tops or hairpins must be regularly removed from the playing surface.

The compact TERRA CLEAN 100 is ideal for this purpose. With a total of eight sweeping rails (2 x 4 rails installed offset to one another), it reliably takes up dirt and transports it to a riddle screen. Dirt is separated from recyclable infill

material and collected in a container. The infill material is then returned directly to the artificial turf surface.

The two-sided wheel drive, each independent of the other, ensures a uniform, intensive sweeping and sieving performance, also when negotiating curves. For easy handling, the TERRA CLEAN 100 is equipped with a central working depth adjustment as well as a transport position where the sieving and sweeping roller drive can be manually switched off.

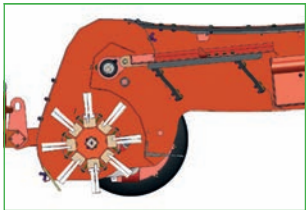

## The benefits:

**Towing vehicle can be deployed independently** thanks to double-sided wheel drive, independent of each other

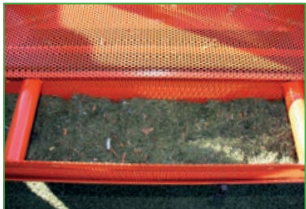

**Central working depth adjustment**

**Gentle collection** of the surface dirt with eight soft sweeping rails

**Comb** to loosen the infill material (optional)

**Reliable separation** of coarse dirt and infill material

**Brush** for the uniform incorporation of the screened infill material (optional)

TECHNICAL DATA	
Length incl. mounting in cm, approx.:	240
Working width in cm, approx.:	120
Weight in kg, approx.:	218
Work output, approx.:	7,000 m <sup>2</sup> /h
Total height in cm, approx.:	63.5–73.5
Outside width of the machine in cm, approx.:	165.5
Ground drive:	2 wheels of 40 cm diameter each

Descriptions and illustrations are non-binding. The construction and design are subject to modifications.
